Appl. No. 10/787,097 Group Art Unit: 2611 Amdt. Dated June 8, 2007 Reply to Office Action of April 20, 2007

- Page 6 -

17. (original) The method of claim 15 wherein said transmitter includes a gain controlled amplifier and said method further comprises:

based on said indication of desired average transmitted power, producing a gain control signal for said gain controlled amplifier; and

based on said gain control signal, producing said first adjustment signal.

- 18. (original) The method of claim 15 further comprising producing said second adjustment value by determining an ideal adjustment value corresponding, in a mapping table, to said indication of desired average transmitted power.
- 19. (original) The method of claim 15 wherein said producing said second adjustment value further comprises:

producing an indication of desired peak transmitted power by summing said indication of desired average transmitted power with an indication of peak to average power ratio; and

based on said indication of desired peak transmitted power, producing said second adjustment value.

20. (original) The method of claim 26 further comprising:

converting said correction value to a correction signal; and

based on said correction signal and said first adjustment signal, producing said parameter signal to control said aspect of operation of said transmitter.
